**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3-4, 6-12, 15, 17, 19-23, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art (APA) in view of Hornung (5,954,539), Sonoda (4,466,692), and German'038A1.

The APA optical ferrules discussed in the background of the instant invention lack the claimed arrangement of several plastic ferrules with at least one connection section, wherein at least two ferrules are connected with one another by the at least one connection section, and wherein a plurality of mutually connected ferrules form a belt.

Hornung discloses plastic ferrules connected by together to form a belt (see figure 12).

Sonoda discloses interconnected ferrules forming a belt (see figures 11-13).

German also discloses fixing ferrules 4 on belt 10.

Art Unit:

Therefore, it would have been obvious for one of ordinary skilled in the art to provide or construct the APA optical ferrules with at least one connection section, wherein at least two ferrules are connected with one another by the at least one connection section, and wherein a plurality of mutually connected ferrules form a belt in view of the teachings of Hornung ,Sonoda and German.

The above belt feature would allow for the handling and manufacturing of multiple optical ferrules simultaneously as is well known in the manufacturing art. Regarding the specific shape or construction of the belt arrangement are deemed obvious design variations and that it would also have been obvious to form the belt into specific shape based on the selection of various molds.

### ***Response to Arguments***

1. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
